

Business Software Developer

About You

- ◆ You take pride in the quality and brevity of your code.
- ◆ Your superior communication skills allow you to quickly understand information presented in documents, meetings, over the phone and through e-mail.
- ◆ You understand the basics of how information systems work and are interested in developing software to solve business problems.
- ◆ You have completed (or are in the process of completing) your undergraduate degree and have completed a number of business-related courses.
- ◆ You have taken at least one accounting-related course and understand the basics of accounting. You understand the difference between debits and credits and about double-entry accounting.

Job Description

Business Software Developers have responsibility for writing the code of business & accounting software solutions for small and medium sized businesses.

Activities performed by Business Software Developers include:

- ◆ Software development using Microsoft development tools including:
 - Visual Basic and Visual Basic .NET
 - ADO
 - Microsoft SQL Server
- ◆ Software Testing and Quality Assurance
- ◆ Technical Support

Salary will be negotiated based on relevant experience and skills. Candidates should however have at least 2-3 years experience working with ERP (i.e. business / accounting) software.
