

# BLUE LINK

Blue Link provides the following advanced inventory management features.

Feature	Description
Inventory Counts	- Supports full cycle counts and retroactive entry of counted items
<a href="#">Lot Tracking</a>	- Allows for the tracking of internal and external lot numbers - Crucial for companies in the food, medical and pharmaceutical industries
Serialized Inventory	- Blue Link handles serialized inventory
Backorder Management	- Rules-based automated allocation of received inventory to backorders
Multiple Warehouses & Inventory Locations	- Track inventory available across multiple warehouses and locations
Inter-Warehouse & Inter-Company Transfer	- Manage the movement of products between warehouses or related companies
Automated Replenishment Routines	- System-generated purchase orders - Ability to link purchase orders directly to sales orders
Multiple Units of Measure	- User defined
Kitting & Bill of Materials (BOM) Support	- Track kits made up of multiple products grouped together for sale, and manage raw materials and product components that are assembled into finished products
<a href="#">Landed Costs</a>	- Enables tracking of true inventory costs including duty, brokerage, freight etc.
Sales Analysis	- Pre-built reports plus access to detailed sales information using various external report writers
Sales Budgeting	- By product or by customer
Advanced Accounting Features	- Check out our <a href="#">Advanced Accounting Features</a>
